Group quiz

1. What output is produced by the following Python programs? (If the "output" includes an error message, briefly state what goes wrong.)

a)

```
def foo(x):  
    x = x + 5  
    print(x)  
  
x = 42  
foo(x)  
print(x)
```

b)

```
def print_area(length, width):  
    area = length * width  
    print(area)  
  
length = int(input("Enter length: "))  
width = int(input("Enter width: "))  
print_area()
```

2. Define a Python function that takes two strings as its arguments, and prints the longer of the two. (If they are both the same length, print the first one.)
